

Leaping to Orlando?

Are you attending [FIS Emerald](#) to learn what's new for innovative bankers and payers? Then make plans to connect and learn more about how Leap can build your projects **quicker and cheaper** with pre-built connectivity to FIS's Code Connect. We also have a loan product coming out that can be customized to your needs. [Email Marla Johnson](#) and meet-up in Orlando!

"With Leap, our customers can rapidly innovate while removing the technical and staffing hurdles to bring new products to market."

- Karl Asha, Product Manager at FIS Global

LEAP AMAZING MINUTE

APRIL 2022

Solution Story:

Add a Google Map to Your App

3 Minutes

[Watch Now](#)

Want to see Leap in action?

See how you can use Leap to add a Google Map to your App in a Snap! Check out this [3-minute video](#) that shows how quick and easy it is to use Leap to add a Google Map API to Leap's Loan Portfolio Management application. Is there something you want us to demonstrate?

Challenge us by [sending an email](#) describing a problem you'd like to see Leap solve.

What is EY saying about Leap?

To get your wheels turning, learn what our client, Abe Hadad, at Ernst & Young says about us:

I'm the Business Technology Leader (think of me like a CTO) for EY's International Tax service line. **In my role, one of the things I get to do is continuously evaluate the business operating model and craft a technological strategy that mirrors and influences the business model and strategy.**

As part of our business strategy, we needed technology that could *scale and quickly adapt to our ever-evolving market without breaking our budgets* due to the market demanded functionality churn.

Leap XL seems to fit the bill for us because of ***its easy-to-implement, cloud ready, technological platform where we can build or adapt applications very quickly as the market needs evolve.***

We are committed to leveraging Leap XL as one of the many pieces to our technological strategy which will continue to evolve over the next few years.

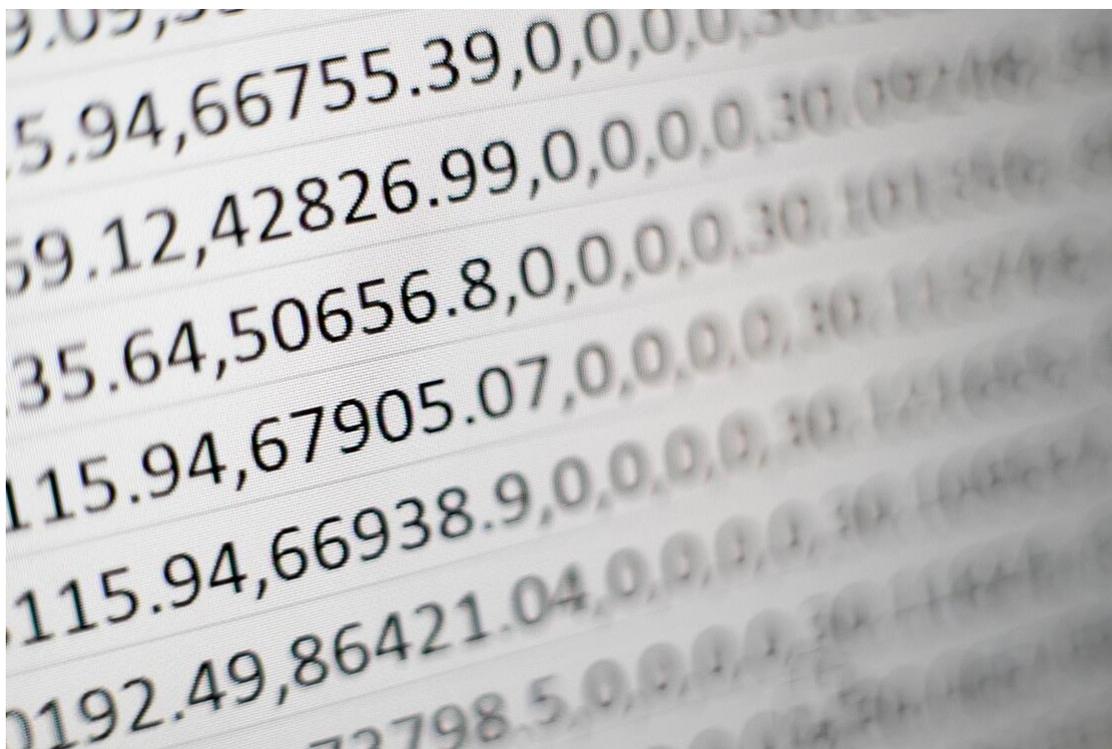

Why Leap? According to Karl Asha of FIS Global

We are seeing increased demand in the financial space for rapid digital transformation and innovation. Hence the interest in low-code or no-code development, which ***drastically reduces the dependency on technical and development staffing*** to prototype and build internal and customer-facing applications.

The Leap platform allows financial institutions that are reliant on spreadsheets to turn data and formulas into shareable cloud-based web applications and real-time reports. The technology broadens the reach of products powered by the FIS Code Connect API ecosystem through a ***streamlined process of simply dragging and dropping cross-product functionality into a target application and workflow.***

With Leap, our customers can ***rapidly innovate*** while removing the technical and staffing hurdles to bring new products to market. Improving their day-to-day operations and their relationships with their customers through innovative technologies is the goal.

What's New: Love your spreadsheets?

[Brian Stack](#) and [Jay Davidson](#) want you to know that we can now support "temporary" spreadsheets within a user session. Think of them as templates, they

can be populated from various data sources and used for display and downloads. The download can contain simply values, formulas, or any combination of the two needed for your next project. Let us know if you want to see more.
